

EDUCATION

Glen Eden Intermediate School Development Planning, Administration, Library, Technology

ASC assisted the school in the planning and implementation of a significant growth in the school roll of an additional 80% student population on the existing site. The particularly challenging aspects of this project were the requirements to maintain the site in continuous operation during the whole project and not to build over any part of the site that does not already accommodate buildings.

The new technology building is particularly notable because it represents a significant departure in the design of such facilities.
